Houston Energy Deepwater Ventures I, LLC 1415 Louisiana Street, Suite 2400 Houston, TX 77002 Attn: Mr. David Amend

Gentlemen:

Reference is hereby made to that certain Galapagos Area Loop Subsea Production System Construction and Operating Agreement dated effective December 1, 2011 (as amended) by and between BP Exploration & Production Inc. ("BP"), Fieldwood Energy, LLC. ("Fieldwod"), Red Willow Offshore, LLC ("Red Willow") and Houston Energy Deepwater Ventures I, LLC ("HEDV"), (the "LSPS COA"). Reference is also made to the Genovesa single flowline plans developed and submitted by Fieldwood to BP on November 3, 2020 (and further supplemented on November 17, 2020, November 30, 2020 and December 7, 2020), collectively referred to herein as the ("Fieldwood Single Flowline Plans"). Capitalized terms not defined herein shall have the meaning set forth in the LSPS COA.

As the Parties discussed in the recent December 4, 2020 co-owner meeting, BP has imminent plans to conduct an operation on the LSPS SC PLEM #2 wherein it will tighten all bolts on the SLDV1 valve gasket seal in an effort to remediate the leak observed April 14, 2020. This operation is being captured under a separate AFE from the subject of this proposal. At this time, BP's intent is to execute said operation and perform testing to evaluate the effectiveness of this work.

In furtherance to the desire expressed by Fieldwood, Red Willow and HEDVI (collectively referred to herein as the "MC 519 Producing Parties"), BP understands that the MC 519 Producing Parties desire to progress the evaluation of a single flowline option on the LSPS (to enable production from the Genovesa well) in tandem with the previously mentioned bolt tightening activity. BP (in its capacity as LSPS Operator) is willing to perform analysis on the technical feasibility of converting the eastern portion of the LSPS into a single flowline to enable production from the Genovesa well and MC 519 Satellite Lease, while also taking into consideration the Fieldwood Single Flowline Plans previously shared. Given the nature of this feasibility study will be of sole benefit to the MC 519 Producing Parties, BP will treat the study as a Sole Benefit Operation pursuant to the terms of the LSPS COA.

In furtherance to the above, attached for the MC 519 Producing Parties' review and approval is the subject AFE in the gross amount of \$500,000 for costs related to BP's evaluation of the conversion of eastern portion of the LSPS into a single flowline for the benefit of the Genovesa well. Given the work contemplated under this AFE is being treated as a Sole Benefit Operation, Equity Interests on the AFE have been adjusted to reflect the MC 519 Producing Parties bearing the full cost of the study. In addition to the AFE, BP has included a cost, time, resource ("CTR") document for further information regarding the cost breakdown. Further information regarding the scope and deliverables of this work are contained in the attached AFE.

Finally, please note that the proposed activity under this AFE is only to evaluate the technical feasibility of converting the eastern portion of the LSPS into a single flowline and not a proposal to execute any activity. Should it be determined this activity is technically feasible by BP in its capacity as LSPS Operator, any execution activity would be subject to a separate proposal made pursuant to the terms of the LSPS COA.

Please signify your respective responses to this proposal by having an authorized representative execute the attached AFE in the "CO-OWNER APPROVAL" section and return to my attention. In order to facilitate the commencement of the work contemplated in this AFE, BP respectfully requests your prompt response to this proposal.

Should you have any questions or concerns, please contact the undersigned at (832) 772 – 5325.

Regards,

Jourdan Janik

Jaudan R Jawk
